**Re: Letter of Recommendation
North American Pipeline Services, LLC
3663 Route 9 North, Suite 202
Old Bridge, NJ 08857**

To Whom It May Concern,

I have subcontracted with North American Pipeline Services, LLC (NAP) in October of 2013 and again in July of 2014 for two separate projects located along the waterfront of the Hudson River in Weehawken Township, Hudson County, New Jersey. The existing sites are located on a portion of the former commuter parking lot for the New York Waterway Ferry Terminal. Over the past 15 years, the site has been undergoing a redevelopment for a mixed use project known as Port Imperial with the construction of several multi-story residential buildings with structured parking garages, new roadways, and new infrastructure including a new storm sewer collection system with outfalls to the Hudson River.

The purpose of both projects was to first clean out the existing storm sewers using jet vac equipment to enable the use of CCTV Inspection equipment to video the pipes in order to identify the condition and location of the storm sewer pipes throughout the areas of development that may become impacted and need to be relocated or removed during construction. Due to the proximity of the sites to the Hudson River, the storm sewers were impacted by tidal fluctuations of the river throughout the day which limited the available time to perform the work required.

The first project, identified as Port Imperial South Building 12, proposed to jet vac approximately 1,650 LF of storm sewers, ranging in size from 10" to 42", in the area of the proposed building and offsite including one outfall to the Hudson River. Due to excessive sediment and debris build up in the pipes, only 432 LF of pipe was able to be cleaned and video inspected in the allotted time for the work. However, during the course of the work, a second outfall to the Hudson River which was not identified on any plans was discovered. This resulted in a slight change to the scope of work in order to clean and locate this new outfall.

The second project, identified as Port Imperial South Building 7, proposed to jet vac approximately 536 LF of storm sewers, ranging in size from 15" to 24", in the area of the proposed building and offsite including two outfalls to the Hudson River. Due to sediment and debris build up in the pipes, only 454 LF of pipe was able to be cleaned and video inspected in the allotted time for the work.

The staff at NAP was very professional and knowledgeable during the work performed as well as flexible with the scheduling and timing of the work due to the tidal constraints of the Hudson River, the condition of the pipes with sediment and debris, and changes to the project schedules due to unforeseen circumstances and discoveries. The final report issued for each project was clear and easy to read and the video was provided on a DVD which also was of excellent quality.

I would highly recommend NAP for further pipe cleaning and video inspection services and in fact have already referred them to other clients as well as to my colleagues for use on their projects. If you have any questions, please feel free to contact me at (732) 665-5500 or via email at sdelany@bowmancg.com.

Very truly yours,
Omland Engineering Associates, Inc.
